The Transition of Society Towards Collectivism Based on the Rights of Individuals and Eternal Law

Introduction or thoughts before the topic

Martin Luther King jr. - “A calling to speak is often a vocation of agony, but we must speak” “Science investigates; religion interprets. Science gives man knowledge, which is power; religion gives man wisdom, which is control. Science deals mainly with facts; religion deals mainly with values. The two are not rivals.” “Love is the only force capable of transforming an enemy into a friend.” “If you can’t fly then run, if you can’t run then walk, if you can’t walk then crawl, but whatever you do you have to keep moving forward.” “The principle of self-defense has never been condemned, even by Gandhi.”

Corinthians xiii (adapted) - “Though I speak with the tongues of men and angels, and have not money, I am become as a sounding brass, or a tinkling cymbal. And though I have the gift of prophecy, and understand all mysteries, and all knowledge; and though I have all faith, so that I could remove mountains, and have not money, I am nothing. And though I bestow all my goods to feed the poor, and though I give my body to be burned, and have not money, it profiteth me nothing. Money suffereth long, and is kind; money envieth not; money vaunteth not itself, is not puffed up, doth not behave unseemly, seeketh not her own, is not easily provoked, thinketh no evil; rejoiceth not in iniquity, but rejoiceth in the truth; beareth all things, believeth all things, hopeth all things, endureth all things… and now abideth faith, hope, money, these three; but the greatest of these is money.”

Hippocrates - “Illnesses do not come upon us from out of the blue. They are developed from small daily sins against Nature. When enough sins have accumulated, illnesses will suddenly appear.” “Everyone has a doctor in him or her; we just have to help it in its work. The natural healing force within each one of us is the greatest force in getting well. Our food should be our medicine. Our medicine should be our food. But to eat when you are sick, is to feed your sickness.” “If you are not your own doctor, you are a fool.” “Make habit of two things: to help, or at least to do no harm.”

Nikola Tesla - “What one man call God, another calls the laws of physics.” “The desire that guides me in all I do is the desire to harness the forces of nature to the service of all mankind.” “Science is but a perversion of itself unless it has as its ultimate goal the betterment of humanity.” “Today’s scientists have substituted mathematics for experiments, and they wander off through equation after equation, and eventually build a structure which has no basis in reality.”

Mahatma Gandhi - “An eye for an eye will leave the whole world blind.” “There are two days in a year which we can’t do anything, yesterday and tomorrow.” “The true measure of any society can be found in how it treats its most vulnerable members.” “Live as if you were to die tomorrow. Learn as if you were to live forever.” “The weak can never forgive. Forgiveness is the attribute of the strong.”

Aristotle - “It is the mark of an educated man to entertain a thought without accepting it.” “Educating the mind without educating the heart is no education at all.”

Socrates - “If you want to be wrong then follow the masses.” “When the debate is lost, slander becomes the tool of the loser.” “Awareness of ignorance is the beginning of wisdom.” “In every person there is a sun. Just let them shine.” “It is better to suffer an injustice than to commit one.”

Plato - “A wise man speaks because he has something to say; a fool because he has to say something.” “Reality is created by the mind, we can change reality by changing our mind.” “Good people do not need laws to tell them to act responsibly, while bad people will find a way around the laws.” “Don’t force your children into your ways, for they were created for a time different from your own.” “Poverty doesn’t come because of the decrease of wealth but because of the increase of desires.”

Pythagoras - “Learn to be silent. Let your quiet mind listen and absorb.” “The highest goal of music is to connect ones soul to their divine nature, not entertainment.” “Don’t try to cover your mistakes with false words. Rather, correct your mistakes with examination.” “Educate the children and it won’t be necessary to punish the men.” “The soul of man is divided into three parts, intelligence, reason, and passion. Intelligence and passion are possessed by other animals, but reason by man alone.” “As long as man continues to be the ruthless destroyer of lower living beings he will never know health or peace. For as long as men massacre animals, they will kill each other.” “In anger we should refrain both from speech and action.” “It is better to be silent, than to dispute the ignorant.” “Know thyself and thou wilt know the universe.” “Let no one persuade you by word or deed to do or say whatever is not best for you.” “Some are slaves of ambition or money, but others are interested in understanding life itself. These give themselves the name of philosophers, and they value the contemplation and discovery of nature beyond all other pursuits.”

John F. Kennedy - “The very word "secrecy" is repugnant in a free and open society; and we are as a people inherently and historically opposed to secret societies, to secret oaths and to secret proceedings. We decided long ago that the dangers of excessive and unwarranted concealment of pertinent facts far outweighed the dangers which are cited to justify it. Even today, there is little value in opposing the threat of a closed society by imitating its arbitrary restrictions. Even today, there is little value in insuring the survival of our nation if our traditions do not survive with it. And there is very grave danger that an announced need for increased security will be seized upon by those anxious to expand its meaning to the very limits of official censorship and concealment. That I do not intend to permit to the extent that it is in my control. And no official of my Administration, whether his rank is high or low, civilian or military, should interpret my words here tonight as an excuse to censor the news, to stifle dissent, to cover up our mistakes or to withhold from the press and the public the facts they deserve to know. For we are opposed around the world by a monolithic and ruthless conspiracy that relies on covert means for expanding its sphere of influence--on infiltration instead of invasion, on subversion instead of elections, on intimidation instead of free choice, on guerrillas by night instead of armies by day. It is a system which has conscripted vast human and material resources into the building of a tightly knit, highly efficient machine that combines military, diplomatic, intelligence, economic, scientific and political operations. Its preparations are concealed, not published. Its mistakes are buried not headlined. Its dissenters are silenced, not praised. No expenditure is questioned, no rumor is printed, no secret is revealed. Without debate, without criticism, no Administration and no country can succeed-- and no republic can survive. That is why the Athenian lawmaker Solon decreed it a crime for any citizen to shrink from controversy. And that is why our press was protected by the First (emphasized) Amendment-- the only business in America specifically protected by the Constitution-- not primarily to amuse and entertain, not to emphasize the trivial and sentimental, not to simply "give the public what it wants"--but to inform, to arouse, to reflect, to state our dangers and our opportunities, to indicate our crises and our choices, to lead, mold educate and sometimes even anger public opinion. This means greater coverage and analysis of international news-- for it is no longer far away and foreign but close at hand and local. It means greater attention to improved understanding of the news as well as improved transmission. And it means, finally, that government at all levels, must meet its obligation to provide you with the fullest possible information outside the narrowest limits of national security... And so it is to the printing press--to the recorder of mans deeds, the keeper of his conscience, the courier of his news-- that we look for strength and assistance, confident that with your help man will be what he was born to be: free and independent.”

Thomas Jefferson - "If the American people ever allow private banks to control the issue of their currency, first by inflation, then by deflation, the banks and corporations that will grow up around them will deprive the people of all property until their children wake up homeless on the continent their Fathers conquered.... I believe that banking institutions are more dangerous to our liberties than standing armies.... The issuing power should be taken from the banks and restored to the people, to whom it properly belongs."

Andrew Jackson - “Is there no danger to our liberty and independence in a Bank that in its nature has so little to bind it to our country. The president of the Bank has told us that most of the State banks exist by its forbearance. Should its influence become concentered, as it may under the operation of such an act as this, in the hands of a self-elected directory, whose interests are identified with those of the foreign stockholders, will there not be cause to tremble for the purity of our elections in peace, and for the independence of our country in war. Their power would be great whenever they might choose to exert it; but if this monopoly were regularly renewed every fifteen or twenty years, on terms proposed by themselves, they might seldom in peace put forth their strength to influence elections or control the affairs of the nation. But if any private citizen or public functionary should interpose to curtail its powers, or prevent a renewal of its privileges, it cannot be doubted that he would be made to feel its influence. Should the stock of the Bank principally pass into the hands of the subjects of a foreign country, and we should unfortunately become involved in a war with that country, what would be our condition? Of the course which would be pursued by a bank almost wholly owned by the subjects of a foreign power, and managed by those whose interests, if not affections, would run in the same direction, there can be no doubt. All its operations within would be in aid of the hostile fleets and armies without. Controlling our currency, receiving our public moneys, and holding thousands of our citizens in dependence, it would be more formidable and dangerous than the naval and military power of the enemy.”

George R.R. Martin - “When you tear out a man's tongue, you are not proving him a liar, you're only telling the world that you fear what he might say.”

Observations and Problems/ Flaws in Modern Society

To begin this presentation of my collected thoughts about modern society, I believe it's important to point out and articulate some patents which exist in modern day most people seem to be unaware of or are in denial of their existence. I'm not going to include all the information and uses or methods for the patents only what I find is the most important. I imagine I am going to receive scrutiny, hateful reviews, insults, perhaps death threats, and perhaps even be martyred for the information and views I'm going to specify in this writing, however I believe it's a necessary price to pay to try and bring back the connection between humanity, animals, plants, other forms of life and the nature of reality itself. I'm also going to include words which have had altered definitions from their original intentions and meanings, which are often referred to as hate speech, and I'm also going to try to articulate natural rights in a more universal manner and base it on wisdom rather than imperical knowledge, or base it on the numenal side of reality rather than phenomenal. I will also address to subtle or extreme changes in science, mathematics, and any other subject which I've observed extreme flaws in from the original purpose. The primary difference between modern and ancient times will also be addressed such as the difference in values, ways of life, thought processes, ideas, religious beliefs, and historical infringements, Manipulation methods, and purposes, and anything else I believe needs to be addressed. My hope for this is not to influence any one to support me or hate any ideas, or people, simply to create awareness for my personal ideology and allow others who may have the same idea but lack the articulating ability to specify their idea. We are currently in a time of great peril but also great opportunity, the opportunity to change the world to represent the individuals rights in a collective society rather than something like majority rule, and a system where the individual doesn't represent themselves and their ideas. A time where where humanity no longer needs to have jobs not based on their passion, and where the only centralized part of society can be nothing more than a simple set of rules such as a constitution or limit on abilities to rule over others and choose someone elses way of life for them. We no longer need to have something like a boss or ruler, we need personal responsibility, liberty, freedom, equality, and to focus on arts or creation of technology to benefit humanity rather than create weapons of war to destroy ourselves. We need to recognize there is no act of defense when war is in foreign lands and being enacted through offensive methods, through the manipulation of the human mind using the methodology of fear campaign to induce the divide and conquer arts of a tyrannical empire. I will further elaborate all of my thoughts and ideas further through this writing as clearly as I can and define words in the way I utilize them, at least with any which are different than the current definitions of the words, which I've noticed is often merely a specific use of the word, and as an example before I jump into the rest of the document, the word queer used to be defined as weird or abnormal, simply something people didn't find common or couldn't understand the current definition of the word is defined as a derogatory term for homosexuals, which anyone observing the reality around them and the current religious beliefs and the influential people on the television screen or in popular videos online can see

that the primary reason it's considered weird is because it's viewed as an abomination to nature or God in the Christian religion, but the current definition is only one use of that word since weird is a matter of opinion, some may think owning a pet is queer, or eating meat is queer, or being vegetarian is queer, and the use of the word, or view of what is queer changes for every group of friends, neighborhood, city, town, state, country, any form of community has a different topic or subject which when correctly using that word they might use it to describe their opinion of. I will also write about labels which we give others and ourselves and the purpose or meaning of it. I also recognize some information will be out of order from the other information of the same subject, I'm not interested in being to picky about how this is written I believe recognition and awareness of the information is more important than what they typically teach you in writing class or English class, interpretation of information, and observation without judgment is far more important when acquiring information from my perspective so that's what I'm going to prioritize.

- Cloud seeding – increasing or alterations to clouds

1. US 650 6148b – Nervous System Manipulation by electromagnetic fields from monitors
    1. Physiological effects have been observed in a human subject in response to stimulation of the skin with weak electromagnetic fields that are pulsed with certain frequencies near ½ Hz or 2.4 Hz, such as to excite a sensory resonance. Many computer monitors and TV tubes, when displaying pulsed images, emit pulsed electromagnetic fields of sufficient amplitudes to cause such excitation. It is therefore possible to manipulate the nervous system of a subject by pulsing images displayed on a nearby computer monitor or TV set. For the latter, the image pulsing may be imbedded in the program material, or it may be overlaid by modulating a video stream, either as an RF signal or as a video signal. The image displayed on a computer monitor may be pulsed effectively by a simple computer program. For certain monitors, pulsed electromagnetic fields capable of exciting sensory resonances in nearby subjects may be generated even as the displayed images are pulsed with subliminal intensity. Physiological effects have been observed in a human subject in response to stimulation of the skin with weak electromagnetic fields that are pulsed with certain frequencies near ½ Hz or 2.4 Hz, such as to excite a sensory resonance. Many computer monitors and TV tubes, when displaying pulsed images, emit pulsed electromagnetic fields of sufficient amplitudes to cause such excitation. It is therefore possible to manipulate the nervous system of a subject by pulsing images displayed on a nearby computer monitor or TV set. For the latter, the image pulsing may be imbedded in the program material, or it may be overlaid by modulating a video stream, either as an RF signal or as a video signal. The image displayed on a computer monitor may be pulsed effectively by a simple computer program. For certain monitors, pulsed electromagnetic fields capable of exciting sensory resonances in nearby subjects may be generated even as the displayed images are pulsed with subliminal intensity.

    2. Certain monitors can cause excitation of sensory resonances even when the pulsing of displayed images is subliminal, i.e., unnoticed by the average person
2. US 535 6368 A – Method of and apparatus for inducing desired states of consciousness
    1. Improved methods and apparatus for entraining human brain patterns, employing frequency following response (FFR) techniques, facilitate attainment of desired states of consciousness. In one embodiment, a plurality of electroencephalogram (EEG) waveforms, characteristic of a given state of consciousness, are combined to yield an EEG waveform to which subjects may be susceptible more readily. In another embodiment, sleep patterns are reproduced based on observed brain patterns during portions of a sleep cycle; entrainment principles are applied to induce sleep. In yet another embodiment, entrainment principles are applied in the work environment, to induce and maintain a desired level of consciousness. A portable device also is described
        1. A method of inducing desired states of consciousness in human beings, comprising the following steps:
        2. combining a plurality of replicated electroencephalogram (EEG) waveforms, each indicative of a particular desired state of consciousness, to produce a combined EEG waveform;
        3. superimposing said combined EEG waveform on two separate sets of carrier waves using stereo sound;
        4. creating differential beat frequencies between said sets of carrier waves based on said superimposing step; and providing the resulting signals in audio form to respective ears of a human being, to induce said state of consciousness.
        5. A method as claimed in claim 1, wherein said combining step comprises mathematically averaging said EEG waveforms to produce said combined EEG waveform.
        6. A method as claimed in claim 1, further comprising the step of repeating said combining, superimposing, and creating steps for each of a set of desired states of consciousness, and producing a cycle of sets of resulting audio signals, said providing step comprising providing said cycle of sets of resulting audio signals to respective ears of a human being, to induce each of said desired states of consciousness in cyclic fashion.
        7. A method as claimed in claim 3, wherein said cycle corresponds to human sleep patterns, said desired states of consciousness comprising wakefulness, alpha sleep, delta sleep, and theta sleep.
        8. A method as claimed in claim 3, wherein said cycle corresponds to human sleep patterns, said desired states of consciousness comprising alpha sleep, delta sleep, and theta sleep, said cycle being approximately 90 minutes long.
        9. A method as claimed in claim 5, said method further comprising the steps of providing a plurality of repetitions of said cycle, followed by providing a set of audio signals containing a binaural beat at a frequency indicative of beta consciousness.

10. A method as claimed in claim 1, wherein said creating step includes the step of combining pink sound with said sets of carder waves by shifting of said pink sound with respect to said combined EEG waveform from one stereo audio channel to another, with cyclic changes in amplitude, frequency, and rate of panning.
11. Apparatus for facilitating sleep in a human subject, comprising:
    1. means for setting a wake-up time to select a desired sleep duration
    2. means for generating a first sequence of signals in a cycle corresponding to a human sleep pattern, frequencies of said signals in said first sequence being substantially equal to frequencies of human brain patterns at different levels of sleep;
    3. means for repeating said cycle a plurality of times based on the selected wake-up time; and means for waking up said human subject at the selected wake-up time.
12. Apparatus as claimed in claim 8, wherein said means for waking up said human subject comprises means for generating a second sequence of signals a predetermined time before the selected wake-up time, frequencies of said signals in said second sequence being substantially equal to frequencies of human brain patterns at or near an awakened state.
13. Apparatus as claimed in claim 9, wherein said predetermined time is approximately five minutes.
14. Apparatus as claimed in claim 8, wherein said first sequence of frequencies comprises, in order, alpha frequencies, theta frequencies, delta frequencies, and theta frequencies.
15. Apparatus as claimed in claim 8, further comprising means for generating phased pink sound in conjunction with said first sequence of frequencies.
16. Apparatus as claimed in claim 8, wherein said first sequence of signals comprises a plurality of sets of combined brainwaves, each of said sets corresponding to a different level of sleep, said combined brainwaves within a given set being constituted by combined electroencephalogram (EEG) waveforms of a plurality of individuals, taken when said individuals had attained a different respective level of sleep.
17. Apparatus as claimed in claim 13, wherein said EEG waveforms are mathematically averaged.
18. Apparatus for awakening an individual using brain pattern enterainment, said apparatus comprising:
    1. means for selecting a wake-up time;
    2. means for keeping time; and
    3. means, operative a predetermined period before said wake-up time as determined by said means for keeping time, for producing a first sequence of signals having frequencies in the theta-alpha range, followed by a second sequence of signals having frequencies in the beta-gamma range.

19. Apparatus as claimed in claim 15, wherein said means for producing said first and second sequences of signals comprises means for producing said second sequence of signals at a higher amplitude than said first sequence of signals.
20. Apparatus as claimed in claim 15, wherein said first sequence of signals comprises a plurality of sets of combined brainwaves, each of said sets corresponding to a different level of consciousness, said combined brainwaves within a given set being constituted by combined electroencephalogram (EEG) waveforms of a plurality of individuals, taken when said individuals had attained a different respective level of consciousness.
21. Apparatus as claimed in claim 16, wherein said EEG waveforms are mathematically averaged.
22. Apparatus for inducing a desired state of consciousness, said apparatus comprising:
    1. means for detecting presence of a predetermined level of ambient noise;
    2. means, responsive to said detecting means, for generating signals having frequencies substantially equal to frequencies of human brain patterns when said ambient noise is present; and
    3. means for selecting said signals in accordance with desired human activity in said areas.
23. Apparatus as claimed in claim 19, further comprising timer means, connected to said generating means, for generating said signals for a predetermined time set by said timer means.
24. Apparatus as claimed in claim 19, wherein said timer means is connected to said selecting means to enable selection of different ones of said signals in accordance with desired human activity at different times of day.
25. Apparatus as claimed in claim 19, wherein said generating means comprises
    1. means, responsive to said detecting means, for increasing an amplitude of said signals in response to an increase in amplitude of said ambient noise, and for decreasing an amplitude of said signals in response to a decrease in amplitude of said ambient noise.
26. Apparatus as claimed in claim 22, wherein said generating means further comprises means for discontinuing said signals when said ambient noise falls below said predetermined level.
27. Apparatus as claimed in claim 19, wherein said generating means comprises a digital signal processor and a read-only memory (ROM) connected to said digital signal processor, said ROM storing a plurality of sets of signals, each of said sets of signals having frequencies substantially equal to human brain patterns at a desired state of consciousness.
28. Apparatus as claimed in claim 24, wherein each of said sets of signals comprises a plurality of sets of combined brainwaves, each of said sets corresponding to a different level of consciousness, said combined brainwaves within a given set being constituted by combined electroencephalogram (EEG) waveforms of a

plurality of individuals, taken when said individuals had attained a different respective state of consciousness.

29. Apparatus as claimed in claim 25, wherein said EEG waveforms are mathematically averaged.
30. Apparatus for awakening an individual using brain pattern entrainment, said apparatus comprising:
    1. means for selecting a wake-up time; and
    2. means, operative a predetermined period before said wake-up time, for producing a first sequence of signals having frequencies in a first predetermined range corresponding to a first state of consciousness,
    3. followed by a second sequence of signals having frequencies in a second predetermined range corresponding to a second state of consciousness.
31. Apparatus as claimed in claim 27, wherein said first predetermined range is the theta-alpha range, and said second predetermined range is the beta-gamma range

3. US 1338343 A – Process and apparatus for the production of intense artificial clouds, fogs, or mists
    1. Apparatus for the production of intense artificial clouds from a fume producing product and ammoniacal gas, consisting of flasks containing under pressure in the one case the fume producing product and'in the other case the ammoniacal gas in the liquid state, in combination with a' chimney at the bottom of which a current of air is induced by an ejector brought into operation by the escape of the expanding ammoniacal gas, and means for atomizing the fume producing product'at the top of the chimney in the current of ammoniacal air.
    2. A process for the production of intense artificial clouds, fogs or mists, which conslsts 1n atomizlng 1n a moist ammoniacal atmosphere an anhydrous chlorid mixed with a product which will increase the opacity of the fog.
    3. A process for the production of intense artificial clouds, 'fogs or mists, which consists in hydrolyzing an anhydrous chlorid in a moist ammoniacal atmosphere and adding thereto a substance which will increase opacity of the fog.
4. US 1619183 A - Process of producing smoke clouds from moving aircraft
    1. Among the objects of this invention is the provision of a process whereby smoke producing liquids may be dropped from aircraft, wherein the liquid reacts with one or more of the constituents of the air or atmosphere and generates a smoke screen as it falls. This is an improvement over the present means of generating smoke screens wherein the smoke material is dropped to the ground in containers or else is set out on the ground, and wherein the success of the operation of producing the screen is dependent on the rise of a smoke cloud.

2. A further object of this invention is the provision of a process which may be employed for laying screens of smoke from aeroplanes to protect the planes from antiaircra'ft attack or to protect land fortifications, troops, or ships from enemy fire.
3. A still further object of this invention is the provision of a process for producing long and extensive fronts of smoke in an economic, safe and rapid manner. Other, further and more specific objects of the invention will become readily ap- parent to persons skilled in the art from a consideration of the following description when taken in conjunction with the accompanying drawing.
4. When a liquid is dropped from an elevation at rest with respect to the air it will fall to the ground in the form of stable drops. If, however, the liquid be dropped from a body moving at high velocity, the liquid will immediately upon release become broken up intoa mist and all of the liquid or a considerable portion thereof will be dispersed in the air and not reach the ground. By ejecting the liquid under pressure from an aeorplane or other moving aircraft so that the liquid leaves the plane at approximately the same velocity as the plane passes through the air but in a substantially opposite direction, the liquid will fall as if poured from an elevation at rest, and travels to the ground in substantially stable drops. The present invention makes use of this method of ejecting smoke-producing liquids from moving aircraft.

5. US 2881335 A – Generation of electrical fields
    1. This invention relates to the conversion of mechanical energy into electrical energy and more particularly to a regenerative system for charging bodies or clouds.
    2. It is desirable in many processes to be able to control the charge on a stream or body of discrete particles such as ne liquid droplets, aerosols, dust particles, etc. It may further be desirable to concentrate such particles bearing like charges into isolated volumes and thus to build up an electrostatic iield of high intensity between such isolated volumes of charge concentrations. For example, the establishment of two isolated volumes of charged particles, those in one volume being substantially all positive and those in the other volume being substantially all negative, offers the possibility of creating ahigh potential difference between such volumes of charged particles. Likewise depositing similar charges on a cloud or stream of aerosols or dust particles, for example, oters the possibility of directing the ilow of such particles by means of electrical attraction to a target.
6. US 29008442 A – Method for dispersing natural atmospheric fogs and clouds
7. US 2986360 A – Aerial insecticide dusting device

8. US 2963975 A – Cloud seeding carbon dioxide bullet
9. US 3126155 A – Silver iodide cloud seeding generator
    1. This invention comprises a novel and useful silver iodide cloud seeding generator and more particularly relates to a cloud seeding apparatus for use in aircraft to induce rainfall, disperse fogs and the like.
10. US 3234357 A – Electrically heated smoke producing device
11. US 3313487 A – Cloud seeding apparatus
    1. The present invention relates in general to cloud seeding apparatus and more particularly to an airborne cloud seeding device adapted for the producing of gamma-type silver iodide crystals to be dispensed in clouds for inducing rain.
12. US 3338476 A – Heating device for use with aerosol containers
13. US 3429507 A – Rainmaker
    1. This invention comprises a device and process for the production of rain.
14. US 3441214 A – Method and apparatus for seeding clouds
    1. The invention relates to the seeding of clouds and particularly to a safe method and apparatus for seeding clouds from an aircraft when using an ice-nucleating material generator of an explosive nature.
15. US 3445844 A – Trapped electromagnetic radiation communications system
    1. This invention relates to communication systems and more particularly to the use of trapped electromagnetic radiation to provide an over the horizon long distance communications network or system.
16. US 3456880 A – Method of producing precipitation from the atmosphere and apparatus therefor
    1. A method of inducing precipitation from the atmosphere using an electrode attached to but extended from an aircraft. The invention relates to a method for producing precipitation from the atmosphere and to apparatus for carrying out the method.
17. US 3518670 A – Artificial ion cloud (ion is a “charged particle” so an ion cloud would be a thunderstorm in the terms of quantum mechanics or quantum physics which I’m not a supporter of though they do have accurate descriptions of phenomena they lack explanations of what the relation phenomena has to numena.)

18. US 3534906 A – Control of atmospheric particles
    1. This invention relates to a method for the control of atmospheric moisture and more particularly relates to a method for fog abatement and the modification of clouds.
19. US 3545677 A – Method of cloud seeding
20. US 3608820 A – Treatment of atmospheric conditions by intermittent dispensing of materials therein
    1. Methods of treating atmospheric conditions including intermittently dispensing unbalancing materials such as salts, surfactants, water soluble polyelectrolytes or mixtures thereof in the atmosphere and methods of dispersing fog including dispensing materials that cause coalescence of water droplets in spaced locations throughout a fog.
21. US 3608810 A – Methods of treating atmospheric conditions
    1. Methods of treating atmospheric conditions including dispensing in the atmosphere surfactants, water-soluble polyelectrolytes or mixtures thereof, methods of dispersing fog by dispensing fogcoalescent materials around an unstable spot in the fog and by dispensing fog-coalescent materials in a substantially straight path through an area to be cleared, and methods of increasing rain by dispensing surfactants, water-soluble polyelectrolytes or mixtures thereof around an unstable spot in a cloud.
22. US 3601312 A – Method of increasing the likelihood of precipitation by the artificial introduction of sea water vapor into the atmosphere windward of an air lift region
    1. The invention pertains to a method of producing fresh water utilizing modification of air mass conditions by injecting sea water into solar-heated air to evaporate sea water into the atmosphere and increase the air water vapor content, and thereby greatly increase the capacity of the so modified air mass for absorbing the available radiant energy for warming the air by solar and terrestial radiant energy to increase the ability of the air to absorb increased quantities of water vapor and ambient temperature, and thereafter lift the treated air to sufficient altitudes to produce convective instability, cumuliform clouds and precipitation. Preferably, the injection of sea water into the atmosphere, and the solar heating thereof, occur at alternate land areas disposed windwardly of a mountain or other natural orographic barrier wherein the treated air is lifted orographically.

23. US 3587966 A – Freezing nucleation
24. US 3564253 A – System and method for irradiation of planet surface areas
    1. A system and method for generalized irradiation of relatively large surface areas of a planet, such as the earth, the moon, etc. for illumination, heating, weather control, etc., employing one or more planet-orbiting self-erecting planar-reflector satellites controlled in attitude and orbit position to reflect energy from the sun to a desired area on the planet''s surface.
25. US 3613992 A – Weather modification method
    1. The present invention provides a method for producing rain or snow from natural atmospheric clouds using seeding agents characterized by a high solubility in water and a large endothermic heat of solution in water. Typical examples of materials suitable for use in practicing this invention are urea, potassium nitrate, potassium nitrite, and ammonium nitrate. Laboratory experiments have shown urea to be effective in producing ice crystals in a vapor cloud having a temperature as high as +6* C. In field experiments, urea has been observed to cause snow showers in supercooled clouds.
26. US 3630950 A – Combustible compositions for generating aerosols particularly suitable for cloud modification and weather control aerosolization process
27. USRE 29142 E – Combustible compositions for generating aerosols, particularly suitable for cloud modification and weather control and aerosolization process
28. US 3666176 A – Solar temperature inversion device
    1. A cloud cover trapping air pollutants over an affected region is dispersed by anchored balloons positioned closely above the cloud cover adjacent to the cloud trap. Heat radiated from the balloons produces a thermal updraft to change the characteristics of the clouds and subject them to the dispersal effects of air currents and wind.
29. US 3677840 A – Pyrotechnics comprising oxide of silver for weather modification use
    1. A PYROTECHNIC COMPOSITION WHICH UPON COMBUSTION PRODUCES MIXED SILVER HALIDE NUCLEU FOR USE IN INFLUENCING WEATHER COMPRISES A COMPOSTION MADE BY CURING A MIXTURE COMPRISING SILVER OXIDE, AN ALKALI IODATE, AN ALKALI PERCHLORATE AND A CURABLE OXYGENATED OR FLUORINATED ORGANIC LIQUID POLYMER BINDER. THE COMPOSITION BURNS SMOOTHLY TO PROVIDE BY METATHESIS A MIXTURE OF SILVER HALIDES AS SUBSTANTIALLY THE

ONLY SOLID OR CONDENSED PHASE REACTION PRODUCTS, AND LEAVES SUBSTANTIALLLY NO RESIDUE. THE REACTION PRODUCTS FORM NUCLEI FOR CAUSING NUCLEATION OF WATER IN CLOUDS.

30. US 3769107 A – Pyrotechnic composition for generating lead based smoke
    1. A pyrotechnic composition comprising lead iodate, alkali iodate, boron, and epoxy resin which upon combustion generates a lead based smoke which can be used for artificial weather modification.
31. US 3784099 A – Air pollution control method
    1. A mixture of seeding, pollutant inhibiting, and co-alescing chemicals are vaporized and dispersed in a jetting action into the atmosphere to provide an aggregate of nuclei on the order of subcolloidal approximately submicromolecular sizes upon which nucleations of water vapor in the atmosphere take place free from adjacent nucleations to form water droplets and ice crystals with accompanying releases of latent heat, the water droplets, ice crystals further serving as nuclei in a breeding action for a chain reaction of latent heat releases with the vaporized coalescing chemicals aiding in the coalescence of water droplets and the released latent heat diffuses upwardly in an outward expansion to produce an updraft whereby to puncture atmospheric inversions and inhibit the formation of secondary pollutants.
32. US 3813875 A – Rocket having barium release system to create ion clouds in the upper atmosphere
    1. A chemical system for releasing a good yield of free barium (Ba*) atoms and barium ions (BA) to create ion clouds in the upper atmosphere and interplanetary space for the study of the geophysical properties of the medium.
33. US 3835059 A – Method of generating ice nuclei smoke particles for weather modification and apparatus therefor
34. US 3896993 A – Process for local modification of the structure of fog and clouds for triggering their precipitation and for hindering the development of hail producing clouds
35. US 3899144 A – Powder contrail generation
    1. Light scattering pigment powder particles, surface treated to minimize interparticle cohesive forces, are dispensed from a jet mill deagglomerator as separate single particles to produce a powder contrail having maximum visibility or radiation scattering ability for a given weight material.

36. US 3940059 A – Method of fog dispersion
37. US 4042196A – Method and apparatus for triggering a substantial change in earth characteristics and measuring earth changes
    1. There is disclosed method and apparatus for triggering a substantial change in ionospheric characteristics of the earth and measuring certain selected characteristics of the earth. Substantial energetic particle precipitation is triggered through injection of low energy ionized gas, such as hydrogen, in the region of large fluxes of energetic particles in or near the magnetic equator. The loss process is known to occur naturally but a triggered change is achieved through injection of larger amounts of low-energy ionized gas than are naturally present, preferably in the cusp region, which usually extends inside the synchronous orbit for several hours about local midnight.
38. US 4362271 A – Procedure for the artificial modification of the atmospheric precipitation as well as compounds with a dimethyl sulfoxide base for use in carrying out said procedure
39. US 4653690 A – Method of producing cumulus clouds
    1. The disruption of a thermal inversion and formation of cumulus clouds is duced by the ignition of a pyrotechnic composition containing an alkali earth metal. The combined heats of hydration, condensation and combustion of the composition disrupt the thermal layer allowing the passage of warm moist air into a zone of cooler air. The formation of cumulonimbus or cumulus clouds results.
40. US 4643355 A – Method and apparatus for modification of climate conditions
    1. A fog generator comprises a duct which is preferably vertical and very tall, an air mover for moving air down through the duct, an air director which includes a spout to direct the air emerging from the duct in a substantially horizontal stream in a chosen direction away from the duct and a fog generator which generates a fog into the moving air preferably after the air has left the spout. The spout is preferably rotatable in a horizontal plane. The invention enables a generated fog to be placed where required by the air stream in which it is entrained rather than relying on natural wind drift.
41. US 4684063 A – Particulates generation and removal
    1. A mixer/charger is used simultaneously to mix and electrically to charge a fluid or fluid-like material, and such electrically charged product is distributed into another

fluid for various purposes. In one case the charged product may be mixed with particulate matter used to form smoke--an apppropriate polarity can cause repulsion of the smoke producing particulates thereby to reduce agglomeration and to maximize the suspension time of such particulates in surrounding environment. Alternatively, by distributing the charged product into particulate containing fluid and selecting the polarity such that such particulates tend to agglomerate, expeditious removal of such particulates can be accomplished. The charged product also may be used for distributing mist, distributing ionic material in air, e.g. for sense of wellbeing, and for seeding clouds.

42. US 4686605 A – Method and apparatus for altering a region in the earths atmosphere, ionosphere, and/ or magnetosphere

    1. A method and apparatus for altering at least one selected region which normally exists above the earth's surface. The region is excited by electron cyclotron resonance heating to thereby increase its charged particle density. In one embodiment, circularly polarized electromagnetic radiation is transmitted upward in a direction substantially parallel to and along a field line which extends through the region of plasma to be altered. The radiation is transmitted at a frequency which excites electron cyclotron resonance to heat and accelerate the charged particles. This increase in energy can cause ionization of neutral particles which are then absorbed as part of the region thereby increasing the charged particle density of the region.

43. US 4836086 A – Apparatus and method for the mixing and diffusion of warm and cold air for dissolving fog

    1. A method and apparatus for eliminating fog on a stadium, on airports, highways and the like, dissolves the fog by discharging a mixture of warm and cold air, respectively produced by a warm air, direct combustion generator and a double suction centrifugal ventilator. The warm air generator and cold air ventilator are placed side-by-side with a portable housing and separated by an internal wall.
    2. The mixture of warm and cold is discharged such that discharge satisfies the relation:
    3. 10 Kcal/h:m.sup.3 of ventilated air/h
    4. at a velocity less than or equal to 20 m/s.

44. US 4999637 A – Creation of artificial ionization clouds above the earth

45. US 1338343 A – Process and apparatus for the production of intense artificial clouds, fogs, or mists

46. US 5556029 A – Method of hydrometeor dissipation

1. A method of dissipating hydrometeors (clouds) that includes transmitting electromagnetic radiation (e.g., light energy, from the sun, for example) that is absorbed by water vapor into the cloud to be dissipated and continuing the transmission of such energy into the cloud until it dissipates. The source of electromagnetic radiation can be a large mirror located on the surface of the earth, that reflects sunlight into the cloud to be dissipated. In a still more specific embodiment of the invention, the wind speed, direction, cloud altitude and sun movement relative to the earth is tracked to determine the mirror orientation and tracking necessary to disperse a particular cloud or clouds. In addition, an array of earth-mounted mirrors could be utilized in a coordinated fashion to dissipate a group or larger volume of clouds.

47. US 5628455 A – Method and apparatus for modification of supercooled fog

48. US 5762298 A – Use of artificial satellites in earth orbits adaptively to modify the effect that solar radiation would otherwise have on earths weather

    1. A Satellite Weather Modification System (SWMS) uses earth satellites to harness solar energy to modify the thermodynamics and composition of the earth's atmosphere. SWMS has three subsystems: The first subsystem includes a network of earth satellites called Satellite Engines (SEs) used to reflect solar energy and/or transform solar energy into other forms of energy beams discharged at specified locations. The media at these locations and the media through which the energy beams pass absorb these energies and change them into heat. The second subsystem includes a large network of Remote Sensing Devices (RSDs). These sensors are used to measure local media compositions, dynamic parameters and thermodynamic properties. Sensor measurements are fed back to the third subsystem, which includes a network of Ground Control Stations (GCSs). GCSs provide energy beam guidance by estimating each beam's characteristics and its aim point trajectory as functions of time. Integration of these three subsystems establishes a sensor feedback energy beam guidance and control loop. SWMS's weather modification applications include alteration of precipitation, reclaiming of wasteland, reducing damage by bad weather, and improving environment. Its non-weather related applications include supplying concentrated energy to electricity generating stations (solar, wind and hydro), high latitude greenhouse farms, and solar powered airplanes.

49. US 5912396 A – System and method for remediation of selected atmospheric conditions

1. The system includes a platform assembly which includes a plurality of helium airships for support of an emitting electrode to produce a large amount of electrical charges, in the form of electrons, into the surrounding atmosphere. The electrons may be generated by various apparati, including field induced emission and ultraviolet induced emission and ionization. Also provided are a large bank of solar cells to produce the necessary power for the assembly and a propulsion system, either a propeller system or an ion engine. A positive electrode may also be included which collects the undesirable atmospheric elements, such as chlorine atoms, to which negative charges have become attached. Alternatively, the platform could be arranged to include a negatively charged surface at which chlorofluorocarbons, for instance, can dissociate after they come in contact with negative charges. Such an ion-propelled platform in the high troposphere or stratosphere could also be used for regional and/or global telecommunications.

50. US 5984239 A – Weather modification by artificial satellites

1. A Satellite Weather Modification System (SWMS) uses earth satellites to harness solar energy to modify the thermodynamics and composition of the earth's atmosphere. SWMS has three subsystems: The first subsystem includes a network of earth satellites called Satellite Engines (SEs) used to reflect solar energy and/or transform solar energy into other forms of energy beams discharged at specified locations. The media at these locations and the media through which the energy beams pass absorb these energies and change them into heat. The second subsystem includes a large network of Remote Sensing Devices (RSDs). These sensors are used to measure local media compositions, dynamic parameters and thermodynamic properties. Sensor measurements are fed back to the third subsystem, which includes a network of Ground Control Stations (GCSs). GCSs provide energy beam guidance by estimating each beam's characteristics and its aim point trajectory as functions of time. Integration of these three subsystems establishes a sensor feedback energy beam guidance and control loop. SWMS's weather modification applications include alteration of precipitation, reclaiming of wasteland, reducing damage by bad weather, and improving environment. Its non-weather related applications include supplying concentrated energy to electricity generating stations (solar, wind and hydro), high latitude greenhouse farms, and solar powered airplanes.

There will most likely be more patents listed later on for now though I'm going to talk about the relation these patents have to fear campaign. These patents are used to manipulate the citizen population into increasing regulations like policies, which are contract based mutually agreed upon rules which if violated by ONLY those who agreed to the terms are subject to the consequences or punishment of law, taxes, which are voluntary donations to the state for state run programs for the benefit of the citizenry which ONLY those who've agreed to the terms are subject to punishment of law, and the purpose which isn't punishable by law which is the blame game or judgment those who fall for the campaign subject those who do the actions the campaign convinces people is evil or destroying the world, an example of the campaign would be global warming, climate change, or an ice age, which the blame has been put onto those who drive gas powered vehicles, produce Co2, small companies who provide lumber, and several other completely false and irrelevant variables which contribute very little to the real problems which don't need to be feared but do need to be addressed.

Climate change is the newest campaign which they blame Co2 for and try to tax and regulate Co2 creation however Co2 actually is needed for photosynthesis to create oxygen and stay alive so the more Co2 we create so long as we're not deforesting a massive amount of plants it would actually help the planet, allowing them to regulate and tax it would only increase centralized corporate and government control over the civilian population removing our freedom as people. The second campaign people fall for, or rather campaigns people fall for are much older from the 19th and 20th centuries, ice age and global warming which none of the predictions ever came true for, and has actually been proven and was even proven at the time the predictions were made that it's actually natural fluctuations in the earths temperature that it periodically goes through over time. The real and only issue in reality is only the idea of control and centralized programs, solving local problems with global people or groups not immediately connected to the situation or issue, the best examples would be over reaching governments like the US government, United Nations, etc. or international or national corporations interested primarily or solely on profits.

The solution to this problem is actually simple, splinter businesses which reach larger areas than local communities, international corporations, the only exceptions I can see would be nonprofit organizations or charities, however there is always a loop hole, so going outside the local community might be altogether a bad idea when prioritizing the benefit of people, though that doesn't mean no outside trading with other communities, that's actually a whole different matter in itself from my perspective.

The method to deal with Centralized government specifically the US federal government is with a constitution (social contract written and agreed upon by citizens or those they've chosen to represent them used to specify the limitations of governments

abilities). Our current constitution specifically the bill of rights which states what rights government can not violate or infringe upon, while it specifies many important rights it is not perfect. The rights it does recognize are free speech the right to speak your opinion on a topic and specify what it is you want out of a situation which will allow you to pursue your personal happiness, protest government or other establishments and practice your form of worship or religion so long as it doesn't violate anyones rights. The right to bear arms which states shall not be infringed (meaning changed, altered, or violated in any way. That would include missiles, tanks, and anything else invented with the ability to defend ones self) and protect yourself from those who attempt to violate your rights. The right to not self incriminate which is important for legal defense against tyrants who would seek to lock you away or kill you for unjust reasons. The right to privacy unless being convicted of a crime and in that situation only evidence to support you committed the specific crime you're being accused of is legally allowed to be used and searched for. The right to remain silent which is important if you don't know the terms and definitions of words in the legal system so until you have a representative (lawyer) who does have the knowledge required or necessary it is best to remain silent for your protection from the system especially if you've done nothing wrong. The right to a fair and speedy trial which is important because through history tyrants or unjust rulers have used speaking against them and much more ridiculous reasons, we modern day persons would laugh at typically, as a reason to lock people away or give the death penalty to without trial or evidence many of which ended up being proven innocent after the death or imprisonment of the individual over an extended period of time, the most recent of which is actually in this very year(2019) making it not so much of a laughing matter but a brainwashing scheme to promote government propaganda in the public school system which children fall victim to. The right to not allow soldiers to be quartered in your home without the consent of the owner. The right to not be given excessive bail which would limit your ability to prove your innocence due to the lack of ability to gain adequate materials for your defense. The 10th amendment in the bill of rights is extremely important as well because it states any powers not delegated to the government in the constitution belong to the states or the people.

Above I stated it is not perfect so now I will elaborate what I meant by that, the first thing that is missing from the bill of rights is Medical freedom or choice being specified as a right, which it necessary because only you have the right to choose the best method for treating yourself and your child, the doctor is only required to give you the options you have to choose from, if you don't already know, and then administer the medicine you chose as what you believe is the best option, for example vaccinations need to be voluntary and those who choose not to vaccinate should not be discriminated against, this is important because of situations in the past such as governments all over the world including the US euthanizing

mentally ill people, or purposefully poisoning citizens, sterilizing males, and even injecting people with diseases like AIDS for ethnic cleansing or other discriminating purposes. Another missing right is the right to public access of land and to utilize that land for things like food, water, and shelter, which are all necessary to keep every individual alive. I also think it should be added or specified that the rich can not be given special treatment and money can not be used as a substitute for imprisonment when convicted of a crime, we are all equal so we all need to be held to the same standards when it comes to law. It should also be specified that the government can not force someone to pay a fee for a program they don't wish to support. Whether it be public schools, roads, social security, retirement, insurance, etc. it can not be forced upon the individual to pay a fee for it if they don't support the program or it goes against the individuals right to the pursuit of happiness so long as it doesn't violate another individuals rights. It should also be specified that inanimate objects specifically corporations are not human beings, nor are they animals or plants so they don't have rights, the individuals within the institutions have rights but the institution itself does not have rights. Because they don't have rights it's important to realize that a corporation doesn't have the right to violate your rights as an individual, or the right to sue a human being, or take any human to court for any reason only other humans have that right and that ability in a just society.

Another topic on my mind is the vaccine issues such as, health concerns or adverse effects, mandation, lies, misinformation, and their history of use.

Vaccine injury claims, payments, vaccine type (when data is given) source: VAERS data sheets

- **DTaP, DTP, DT, Td, TT**
  - Anaphylaxis or anaphylactic shock
  - Brachial Neuritis
  - Encephalopathy or encephalitis
  - Shoulder injury related to vaccine administration
  - Vasovagal syncope
- **MMR, MR, R**
  - Chronic arthritis
  - Thrombocytopenic purpura
  - Vaccine strain measles viral infection
  - Shoulder injury related to vaccine administration

    - Vasovagal syncope
- **OPV, IPV**
    - Paralytic polio
    - Vaccine strain polio viral infection
    - Anaphylaxis or anaphylactic shock
    - Shoulder injury
    - Vasovagal syncope
- **Hepatitis B**
    - Anaphylaxis or anaphylactic shock
    - Shoulder injury
    - Vasovagal syncope
- **Varicella**
    - Vaccine strain viral diseases
    - Shoulder injury
    - Vasovagal syncope
- **Rotavirus**
    - Intussusception
- **Pheumococcal**
    - Shoulder injury
    - Vasovagal syncope
- **Hepatitis A**
    - Shoulder injury
    - Vasovagal syncope
- **Influenza**
    - Anaphylaxis
    - Shoulder injury
    - Vasovagal syncope

    - Guillain- Barre syndrome
- **Meningococcal**
    - Anaphylaxis
    - Shoulder injury
    - Vasovagal syncope
- **HPV**
    - Anaphylaxis
    - Shoulder injury
    - Vasovagal syncope
    - Abnormal pap smear
    - Cervical dysplasia
    - Cervical cancer
    - Bell's Palsy
    - Guillain-Barre Syndrome
    - Seizures
    - Paralysis
    - Blindness
    - Pancreatitis
    - Speech problems
    - Short term memory loss
    - Ovarian cysts
    - Blood clotting and heart problems
    - Miscarriages15 and fetal abnormalities
    - Cardiac arrest
    - sudden death
- **Any new vaccine recommended by the CDC**
    - Shoulder injury

    - Vasovagal syncope
- **Unspecified vaccine**
    - Serious eye infection or loss of vision
    - Rash on entire body
    - Encephalitis, which can lead to permanent brain damage
    - Death
- **Deaths in US during 2004 – 2015**
    - Measles deaths 0 – measles vaccine deaths 108 (source CDC and VAERS)
- **Vaccine ingredients with proven negative health effects**
    - Glyphosate
    - Gelatin
    - Sorbitol
    - Sodium chloride
    - bovine cow serum
    - human albumin
    - formaldehyde
    - phenoxyethanol
    - aluminum phosphate
    - aluminum hydroxide
    - aluminum
    - polysorbate 80
    - thimerosal or thiomersal (mercury)
    - egg protein
    - MSG (monosodium glutamate)
    - antifreeze (ethylene glycol)
    - phenol
    - methanol

- borax (sodium tetraborate decahydrate)
- glutaraldehyde
- sulfate and phosphate compounds
- gentamicin sulfate
- neomycin sulfate
- tri(n)butylphosphate
- polymyxin B
- Beta propiolactone
- amphotericin B
- latex
- animal viruses
- mycoplasma
- genetically modified yeast and other GMO
- foreign DNA
- squalene
- human diploid cells (aborted fetuses)
- antibiotics
- peanut oil #65
- acetone
- ammonium sulfate
- formalin
- glycerol
- hydrolized gelatin
- phenol red indicator
- potassium diphosphate
- potassium monophosphate
- polysorbate 20

    - residual MRC5 proteins
    - streptomycin (antibiotic)
    - antimicrobials
    - CpG (synthetic DNA)
    - ASo2, ASo3, AS04
- potential allergens in vaccines
    - Amphotericin B
    - Casein (Bovine)
    - Chlortetracyclin
    - Ovalbumin (Egg)
    - Gelatin (Bovine)
    - Gelatin (Porcine)
    - Gentamicin Sulfate
    - Latex
    - Neomycin
    - Ovalbumin
    - Polymyxin B
    - Serum Fetal Bovine
    - Sodium taurodeoxycholate
    - Streptomycin
    - Thimerosal
    - Yeast

I did not list the specific side effects the ingredients can have on individuals is because I urge you to look into them on your own through scientific studies, documentation, and other sources to find the information to prove to yourself with facts and hard work their harmfulness. The purpose of listing the toxic and allergenic ingredients in vaccines is not to promote anti-vaccine, medical choice should always be promoted above all else, however it is to state that they are not perfect and do have side effects which must be addressed, and the

ingredients should be changed to safer alternatives. We as people should not mandate vaccinations which have so many health concerns, especially when the vaccine act of 1986 removed the liability of vaccine manufacturers from being charged with the injuries they induce in individuals especially those with autoimmune deficiencies, meaning all compensation fees from the vaccine court pay outs or settlements come straight from our tax dollars instead of the vaccine company which profited off of the administration of the vaccination into the injured individual. Another concern I've seen many times from media, corporations, government, and those which fall victim to their campaigns is the fear of someone giving you a disease because they're unvaccinated when there is significant evidence supporting the fact that someone who naturally gets the disease or illness also passes on antibodies to fight it, where as someone who's been vaccinated does not and actually is not supposed to go into public locations such as doctor offices, hospitals, stores, etc. because of the risk of shedding the vaccine strain of the illness to another individual, and those with immunodeficiencies are more at risk of gaining a serious health problem such as death or hospitalization from that strain which their already weak immune system has no defense against due to the lack of antibodies meaning their bodies inexperience with that specific strain of virus.

The next topic I suppose I should write about since it's on my mind all the time is the relation to pharmaceutical medicine, nutrition, health, and disease or viruses. To start I'm going to list vitamins, minerals, and other nutrients, foods they can be found in, foods which are unhealthy which I believe need the most attention, how they can prevent illnesses, pharmaceutical side effects, and other items similar or on the same subject.

Vitamin A (retinol, retinal, retinyl esters, retinoic acid, beta carotene)

- Skin and tissues
- immune system
- bone health
- lower lung cancer risk
- cataracts

Vitamin B1 (Thiamin)

- skin
- hair
- muscles

- brain
- critical for nerve function

Vitamin b2 (Riboflavin)

- helps convert food into energy
- skin
- hair
- brain
- blood

Vitamin b3 (niacin, nicotinic acid)

- helps convert food into energy
- skin
- blood cells
- brain
- nervous system

Vitamin b5 (Pantothenic acid)

- aids in lowering homocysteine levels
- lowers risk of heart disease
- helps convert tryptophan to niacin and serotonin
- helps make red blood cells
- influences cognitive abilities
- influences immune function

Vitamin b6 (pyridoxine, pyridoxal, pyridoxamine)

- aids in lowering homocysteine levels
- helps convert tryptophan to niacin and serotonin
- make red blood cells
- influences cognitive abilities
- immune system

Vitamin b12 (cobalamin)

- aids in lowering homocysteine levels
- lowers risk of heart disease
- assists in making new cells and breaking down some fatty acids and amino acids
- protects nerve cells and encourages their normal growth
- helps make new red blood cells and DNA

Biotin

- convert food into energy and synthesize glucose
- break down fatty acids
- bone health
- hair

Vitamin c (ascorbic acid)

- lower risk of some cancers
  - mouth
  - esophagus
  - stomach
  - breast
- protect against cataracts
- make collagen
  - connective tissue that knits together wounds and support blood vessel walls
- helps make neurotransmitters serotonin and norepinephrine
- Acts as an antioxidant
- neutralize unstable molecules that can damage cells
- bolsters immune system

Choline

- helps make and release the neurotransmitter acetylcholine
  - aids in many nerve and brain activities

- plays a role in metabolizing and transporting fats

Vitamin d (calciferol)

- helps maintain normal blood levels of calcium and phosphorus
  - strengthen bones
- helps form teeth and bones
- can help reduce number of nonspinal fractures

Vitamin e (alpha-tocopherol)

- antioxidant
- aids in neutralizing unstable molecules that can damage cells
- protects vitamin a and certain lipids from damage
- and may prevent Alzheimer's disease

Vitamin b9 (folic acid, folate, folacin)

- vital for new cell creation
- helps prevent brain and spine birth defects
- can lower levels of homocysteine
- may reduce heart disease
- may lower risk of colon cancer
- offsets breast cancer risk among women who consume alcohol

Vitamin k (phylloquinone, menadione)

- activates proteins and calcium essential to blood clotting
- may help prevent hip fractures

Minerals

Calcium

- builds and protects bones and teeth
- helps with muscle contractions and relaxation
- blood clotting
- nerve impulse transmission

- plays a role in hormone secretion and enzyme activation
- helps maintain healthy blood pressure

Chloride

- balances fluids in the body
- component of stomach acid
- essential to digestion

Chromium

- enhances activity of insulin
- maintain normal glucose levels
- needed to free energy from glucose

Copper

- plays an important role in iron metabolism and immune system
- helps make red blood cells

Iodine

- part of thyroid hormone which helps set body temperature and influences nerve and muscle function
- reproduction
- growth
- prevents goiter and congenital thyroid disorder

Iron

- helps hemoglobin in red blood cells
- helps myoglobin in muscle cells ferry oxygen throughout the body
- needed for chemical reactions in the body
- making amino acids and collagen
- neurotransmitters
- hormones

Magnesium

- needed for many chemical reactions in the body
- works with calcium in muscle contraction, blood clotting, and regulation of blood pressure
- helps build bones and teeth

Manganese

- helps form bones
- helps metabolize amino acids, cholesterol, and carbohydrates

Molybdenum

- helps liver detoxification
- antioxidant support
- connect tissue development

Phosphorus

- helps build and protect bones and teeth
- part of DNA and RNA
- helps convert food into energy
- helps carry lipids in blood
- helps shuttle nutrients into and out of cells

Potassium

- balances fluids in body
- helps send nerve impulses
- helps maintain steady heart beat
- needed for muscle contractions
- may help benefit your bones

Selenium

- acts as an antioxidant neutralizing unstable molecules that can damage cells
- helps regulate thyroid hormone activity

Sodium

- helps balance fluids in body
- helps send nerve impulses needed for muscle contractions
- lowers blood pressure

Sulfur

- helps form bridges that shape and stabilize some protein structures
- needed for healthy hair, skin, and nails

Zinc

- helps many forms of enzymes and proteins create new cells
- frees vitamin A from storage in the liver
- needed for immune system, taste, smell, and wound healing
- combined with certain antioxidants may delay the progression of age- related macular degeneration

All of these vitamins and minerals and more which contribute to health which I didn't list can be gained from plant based diets like vegetarian or vegan, meaning there is no necessary purpose in eating meat of any kind. However I'm not promoting veganism, there's not necessarily any reason why meats are bad for you, and free choice in diet are what is primarily important. What is bad for you are things like GMO and GEC foods, pesticides, herbicides, fungicides, etc. and those being fed to animals which have weaker immune systems than humans grow tumors at a more rapid rate than humans, and eating animals which have tumors or other defects and illnesses are what contribute to us becoming unhealthy when on an animal based diet. Also when taken into consideration the same food fed to them which makes them sick is also being fed to us things like obesity, diabetes, cancer, and virtually every disease common especially in the American public makes sense why they're so high in numbers. These foods which people require hazmat suits to spray and take care of the crops are the same foods which we put into our bodies. Just a few years back India had a major issue, no idea if it's still happening due to no media coverage, where farmers were committing suicide at massive rates to escape the life time of royalties they were being forced to pay by companies like Monsanto, because the company would buy land up wind from the farmers not growing their products and spray their crops with their patented pesticides allowing the spray to go down wind to the farmers crops and altering them genetically, and when they would be tested they would test positive for using the companies products, which

they didn't use, and be forced to pay royalties or fees for using a patented product for the purpose of personal profit. In the US they had to gain permission from congress in order to start selling GMO foods on the market and to gain that permission they actually handed congress scientific studies which had blacked out information as if it were classified and studies which had entire pages missing. Yet some how they convinced congress to pass the approval for them to sell these products, they were definitely paid or at least some of congress was, and as a result shortly after we saw a rise in every disease and illness which was extremely uncommon before the production of GMO foods. GMOs aren't the only issues in the US food production either there are also many other problems such as the artificial sugars, and other chemicals such as iodized salts, bleached white bread, and other heavily processed foods in the market today. Many people don't see the pattern left in the situation either, where the same people which invest heavily in the foods which make people sick and even paid to hide the evidence of that being the case, also heavily fund the pharmaceutical industry, you know the pills with 32 pages of side effects most of which being worse than the current problem they're being prescribed to solve. These are only some of the issues the list actually could go on for days if I made that my priority to educate those reading this entirely, but that's not my purpose, my purpose is to speak my mind about what I personally see and read, and the patterns I've become aware of because of my quest for answers to the problems I see around me, not do further research to spoon feed people the information I worked hard to attain through my life time.

Since I mentioned the pharmaceutical industry above I believe I should stay on the subject of the so called medication given to us today, everything from asprin and tylenol, to heart medication and chemotherapy, have extreme side effects which most people I meet are completely unaware of or don't try to think about it as if the problem will go away with wishful thinking, which to me is the very definition of insanity, the denial of reality, which never in history has that ever been what solved problems, and actually only creates more problems especially in the long run. Chemo literally burns your insides into goop, take four more tylenol than what it says on the container as a maximum dose and you can and actually most likely will die, heart medication is nothing more than a blood thinner which contributes nothing to actually solving the problem of clearing the cholesterol from your veins and arteries which have created blockages which is exactly what contributes to your risk of heart attack. With diabetes they prescribe you insulin, which the creator of the product actually wanted it to be released for free and now costs several thousand dollars, doesn't actually help you no longer be diabetic but actually only prolongs how long until diabetes kills you. The primary cause of diabetes is processed sugars which your body can't digest and utilize as efficiently and chemicals like aspartame which literally train your body to no long be able to process

glucose and fructose which is what diabetes is, and the cure for it is not insulin injection, but actually a lot simpler it's things like honey and fruits rich in natural sugars among other nutrients which train your body to produce insulin on your own again over time, that doesn't mean immediately stop insulin injection but that combined with using nutrition to counter the illness you can slowly ween off of it until it's no longer needed. Using that approach to every common illness within a generation we could become healthy as a whole population or people, but in order to do that we must take personal responsibility for our health and what contributes to destroying it and then just not do it, if there are no healthy alternatives then it's time to ban these companies or at least the toxic ingredients from being used.

The next issue I have is with the growing homeless population which people seem to feel bad for but do nothing about, and call them entitled when people or they say they want a home and not to sleep on the cold concrete. You see every single human being has the right to utilize nature for what ever purpose so long as it doesn't harm another person and violate their rights, especially for purposes such as food water and shelter, you paying so much for your home and property taxes even after they're paid off leaves you with a false sense of accomplishment given to you by being consistently ripped off. You were born on this planet and didn't ask to be born anywhere so why do you pay to continue living here, when it's you and everyone elses right to be here. If you think your problem is with the homeless thinking they're entitled for wanting their rights then you're completely wrong, your issue is with the government and their excessive regulation on the citizen population which is actually an extremely recent thing like 20th century recent, and the corporations keeping your wages stagnant or at the same place they were decades ago while prices rise, and the real estate industry increases property values so all your cheap labor can only afford an apartment, or you have to save every penny and completely abandon your passions for the hope of gaining a shelter which fits your standards.

There is also the issue of the private central bank called the federal reserve in this country which is completely destroying the economy through inflation and deflation resulting in higher and higher homeless populations and the lowering of the value of the dollar making your labor worth less and less every single year. Something both Abraham Lincoln, and JFK lost their lives for confronting. Lincoln did so by creating the greenback during the civil war to pay for the war, instead of allowing a private bank which sells them the money at interest, printing it yourself keeps it's value. He was then assassinated and the next person in line who took his place immediately renewed the private banks ability to print money, shortly after we saw the first deflation period the great depression. JFK did so by signing executive order 111110, which returned power to print money to the treasury backed by silver, shortly after, he also was assassinated and they blamed some cook for doing so as they did Lincoln, which anyone who

questioned who was actually responsible for the assassination, since 50 witness testimonies stated the one blamed wasn't even on the same floor as where they found the rifle at the time of the shooting and even an hour prior to the shooting and everyone in his squadron in the military stated that he was such a bad shot even if he was point blank range from a target they said he would still miss, but anyone who questioned it was labeled a conspiracy theorist by the CIA, which is where that term was popularized, and it was later proven in court and the CIA was forced to pay a settlement for being involved in the death of JFK, and the same thing actually happened in 1991 with the supreme court case which resulted in the ruling of the CIA being involved in the death of Martin Luther King Jr. After he died they immediately threw out the order and gave power back to the federal reserve. There is only one other president which I've heard of, though that doesn't mean there wasn't more, Andrew Jackson prevented the first private central bank from becoming a threat to the American population and was even quoted on his death bed as stating his greatest accomplishment of his lifetime was killing the banking system.

Something important to realize if everything mentioned in this writing comes back to the same problems, the problems of lack of transparency, lying within public, governmental, and corporate programs, the education system failing to teach children the facts realized by previous generations after the situation was already forgotten and people had moved on to another problem in this world of distractions, and the overwhelming amount of people who remain silent in situations allowing primarily the people with bad intentions to use their voice, a quote I'm not sure of it's origins but it is definitely true when you think about it and come to understand it is "evil only triumphs when good men do nothing". Some things which prove that statement are the governmental programs like mk ultra, operation northwoods, project paperclip, jade helm (Joint Assistance for Deployment Execution Homeland Eradication of Local Militants), military projects chemtrails and haarp, poisoned alcohol during the prohibition, microwave weaponry, destroying holistic doctors and activists or whisteblowers reputations, biological and chemical warfare on the US citizenry soldiers and civilians, plum island, false flags such as the uss liberty, 911, pearl harbor, northwoods as mentioned above, the way the obama administration and bush administration re-legalized government propaganda and funded a program for it under the name of combating foreign propaganda, operation mockingbird, DUMB (deep underground military bases), fema camps for "domestic terrorists" which ultimately anyone who disagrees with government is on the list of domestic terrorists, the FBI documentation stating the government gave aliens permission to abduct and run experiments on people, project bluebeam which states the government is going to use a fake alien invasion to kill civilian populations, the CIA heart attack gun, and the list actually just keeps going it's nearly endless and would take a very long time to list it all.

There are also the many situations where the military or other government agencies were sent in to kill innocent people on US soil. Some examples of that are The Malheur national wildlife refuge stand off with the FBI, Branch davidians, pressuring MLK to commit suicide, ruby ridge, kent state, rodney king riots, wounded knee, fred hampton assassination, and many more yet again.

Another thing not realized until after it happens is all the drone strikes in foreign countries specifically targeting those who may bring the country out of poverty such as doctors, diplomats, laborers, teachers, even children. Meanwhile the troops here in the US or in some base launching the drone strikes are laughing on video like it's some video game or tv show, the disconnection from reality is apparent to anyone willing to see the truth. A relation people aren't very aware from my experience has to do with some of the neurological altering patents mentioned earlier on, some statistics taken from wars in the past were something like 76% of soldiers in ww1 actually missed their shots on purpose because they didn't want to take a life, because when you're connected to reality you realize that you don't want to kill anyone you just want to protect what's important to you, and in foreign lands over time it becomes less and less likely that you can tell yourself you're protecting whats important to you by invading foreign lands. Modern day we have massive suicide rates continuing to rise after people retire from the military, which didn't use to happen as frequently. After ww2 simulation programs were made the first, first person shooter video games, and they noticed as people became more used to these simulations they were actually becoming more willing to take a life without thinking about it, and the purposeful missing lowered over time as the games gained better graphics and were more realistic. Currently we have games which train people to be able to fly drones training children to be ready for warfare when they become adults, all proven with evidence and the pattern is apparent to anyone who recognizes this information.

The issue with the education system is it's not about creativity, it's not about pulling out patterns you recognize, nor is it about finding your passion. It's about choosing the right answer on a curriculum decided by the largest funders, which are corporate investors and of course they don't care about educating the populace they care about increasing profits and everyone knows it, but nobody wants to do anything about it mostly because they lack an alternative idea, which is the result of the education system indoctrinating you into following the norm rather than being creative and thinking outside this man made box I our imaginations. The human mind operates at a certain EMF (electromagnetic frequency) the higher the frequency the more imagination and creativity, along with the more information which can be held and the higher the IQ or pattern recognition you will be capable of attaining, and what school does unknowingly or knowingly is limits that EMFs ability to go

above the current highest one which exists. It has very little importance whether someone believes the earth is flat or round, whether the sun revolves around the earth or the earth around the sun when peoples education doesn't limit their ability to search for answers and create new technology, new forms of art and anything else which doesn't violate another persons rights. I believe the book A Brave New World clearly defines and explains the current issues with the education system and how we are designing our own prisons in these structures called cities limiting our own privacy by choice, with the influence of wealthy people influencing us into the mindset that this is what we want through school, tv, radio, science, history, and every subject/ technology we've created/ discovered in our pursuit for the truth and to explain the reality around us. Of course it really hinders peoples ability to comprehend information when schools primarily have you read summaries of information discovered by people modern day and from the past, the best way to remove that hindering in our own minds is to gain the knowledge first hand through sight, touch, hearing, and especially rather than reading summaries reading direct translations and the most effective would be to learn the language it was originally written in and read the untranslated text though that does require a lot more effort and time so my suggestion is primarily focused on prioritizing the direct translations rather than summaries.

There is also the issue with "scientists" and the promotion of materialism or atomism in schools. The complete disregard for metaphysics or numena which is EMF or magnetism in itself something which affects the phenomenal reality but it in itself has no phenomena or quantization. Everything from time, to effects of matter, to written history, etc. is quantifiable or calculable meaning it can be counted, but everything in the universe which can't be is completely disregarded and that includes what time is, what gravity is, what magnetism is, what matter is, etc. The only thing which modern science does is mathematically calculates what reactions can be given from a certain action, so in other words it describes effects of phenomena over a given duration which is calculated by effects of phenomena. An example to calculate the fastest runner first they calculate how to measure their speed which is you take the period of duration which is called a day equally divide it into sections called hours, then divide that into what is called minutes, and then seconds, then milliseconds, then after deciding on a duration which is accurate enough to measure even the most subtle differences in phenomena you decide on a unit of measure which lest just say is a mile to calculate that one must decide on a smaller unit of measure which can be calculated by hand such as the length of a foot after multiplying that by 660 you have what is called one furlong multiply that by 8 and you have a mile after the unit of measure becomes larger than one is capable of measuring by hand or the numbers get so large they're hard to work with another unit of measure is added, usually at an easily divisible length, different cultures began with different

lengths to recognize distance easily for themselves like inches and feet and meters and millimeters, so after the units of measure have been taken care of all one needs to do is run that distance and calculate the duration of running the distance decided. However that unit of measure is merely an agreed upon unit outside of our own imagination it ultimately means nothing and we can change the universally recognized units whenever we want to something more useful if these become less useful, and it's because of our planetary orbit that we even have the units we have if we say came from mars and developed these units there rather than mars having a longer year than earth our perspective would be the opposite we would see it as earth having a shorter year than our planet rather than mars having a longer year, making our entire unit of measure useful only because of our perspective and showing exactly how perspective creates reality.

Then we have the issue of over regulation which severely limits the ability for someone to make a small business independently based upon the product of their own labor. Majority of small businesses are started through loans, government programs, or some other method which ultimately gives another individual the ability to support or deny your ability and right to provide a product or service to another individual purely because you want to provide it. For instance if you were to create a website for free trade like a better version of amazon, which did exist it was called the silk road and the creator is currently in prison for creating it, because certain products or services are illegal, whether they violate anothers rights or not, it was considered a crime to create a free market. Things like that severely limit the creative ability of humanity, and greatly aid in corporate profits because after the person who provided the service is out of the equation they can revamp the idea in a way which will benefit themselves and further limit the ability of the average person to be independent, and the result of which is the increase in the consumerist mindset. Another result of which is a higher incarceration rate which profits the private prison industry, and the increase in violent crime rate due to people defending their ability to make decisions free of government intervention so long a crime (violation of rights) isn't committed. The media aids in this problem by advertising the victim as being the aggressor and using policy (contract only those who agreed to are subject to) as if it was law, claiming the victim is a criminal. They did the same thing with the alcohol prohibition, war on drugs, war on terror, and many more situations through history. It's the methodology of tyrants create a fake problem based upon false humanitarian beliefs and overly moral values which violate anothers rights, then they sell you a regulation, tax, policy, etc. as a solution, when all it's actually doing in the long run is creating further conflicts they can sell you another false solution to in the future and it's not a new method it actually dates back further than ancient Greece and Egypt. Take the Black panthers as an example they created the war on drugs and gangs, infiltrated the panthers, and separated

them into the modern day bloods and crips. Which as a result actually only increased gang activity gave rise to the war on fire arms, caused the gangs to forget what they originally stood for which was protection of black communities against police brutality during segregation, and flooded their streets with drugs like opium giving those who felt like they'd never escape poverty a product which would make them contempt in the situation. All caused by the CIA and FBI, corporate investors, politicians spreading fear campaign, and over all just any manipulation tactics which worked on ignorant, fearful people.

Fear is a very dangerous thing to mess with, it only exists within the mind of the individual, but as it gets spread from people stating what their fears are and why they're afraid of it, or making another person or group look like "savages" or a threat to their existence, or conditioning like reward punishment systems, or many other ways to induce fear in an individual it becomes more and more dangerous, it has the ability to create delusions, and cause irrational thoughts, even convince you to do things which once you come back to reality you regret. Things like genocide, theft, seclusion, segregation, and much more are all possibilities of the capabilities of fear. Every empire in history used fear to convince their population to go to war, to incite infighting, to produce campaigns like the persecutions of muslims, christians, pagans, witches, Jews, and many, many other persecutions modern day and through history.

I suppose now I will mention how ridiculous it is to allow the alterations of word definitions, the book Animal Farm is really good at giving a fictional but realistic reasoning as to why and how they're altered and what the results of allowing them to be altered are. I'm not going to talk about how they did in the book if you wish to know I highly recommend you read the book, but I am going to mention what is currently happening in our society at this moment in time and through the history of the US, and some of the results of the changes, such as self censorship or censorship of another individual because you don't approve of the word, examples of this are with words like the N word, queer, fag, fuck, shit, bitch, and other terms considered to be "hate speech" or derogatory terms for a people or person(s). Now I'm not saying they weren't used as derogatory or for mean purposes, however that wasn't what their definitions were intended for in itself. All speech or all words are created for the purpose of describing a noun, person, place, thing, idea, or whatever. If you look into dictionaries from the early 1900s or earlier, the physical copies, you tend to see a pattern with words and how not a single one of them actually meant anything related to what they mean today, and to start my explanation I will mention the N word. In a dictionary I managed to stumble across that word among many variations of that word one example is niggardly, it of course merely meaning acting as a N word, and once you look up the word it's definition is nothing close to a derogatory term for a black person like it is today, it was actually just a being of ignorance with

no cultural, ethnic, racial, or any other affiliation of any kind, it was merely another way to call someone stupid, or more precisely ignorant, and without a specific target group or person(s) it simply could apply to anyone, white, black, brown, or whatever, Irish, British, African, Asian, Muslim, everyone if they were ignorant it could apply. What happened was greedy slave owners, and I specify greedy ones because not all were greedy some merely wanted to keep the Africans out of the hands of the greedy and actually treated them really well, since good people exist in every industry and it's been that way since the dawn of humanity and the dawn of any industrys creation, but they got their hands on the Africans, and anyone which asked who they were or what they were doing there, the ignorant uneducated masses, the greedy would return with an answer along the lines of "Oh they're just N words" much like how tyrants and empires would say cultures outside their own were savages, and then the uneducated would tell that to their children, and began a cycle of ignorantly using a word they didn't understand, and over time the more who used that word without looking into the definition and only allowing it to apply to those the rich deemed were capable of fitting the definition, we ended up with completely forgetting the roots of the word, and even came to hate a word when a word hates nobody and only is used how the one using it decides to use it. If it had been used correctly people would have understood the ones who called the Africans that word most often actually fit into the category of that word themselves and more often fit it better than the Africans they used it to describe, since Africans were the very soul of the southern states economic capabilities, they did nearly all the labor and they were by no means ignorant, they merely didn't receive and education from schooling, which that in itself isn't what makes someone ignorant, some of the brightest people in history didn't receive any schooling, not all but some. The next word queer, when it was first defined all it meant was weird, out of the norm, and when society pushes people to consider those who like the same sex as not normal, or even a sin, homosexuals become the thing most people used that word to describe because they didn't understand, they were ignorant of the homosexuals situation, and why they would like the same sex. Fag was a bundle of sticks, I seriously hope you can understand why that became used as a term for homosexuals just based upon that definition and understanding the ignorance of the population at that time. As for cuss words I am just going to explain them all at the same time, they aren't being censored because of their definitions, some don't even have definitions, which apply to anything, they're merely words to express dislike of something, and that's the definition. The conditioning of modern society has created so much fear or extreme dislike over those who are angry or hateful, whether logical or not, that any word which expresses their dislike is seen as a threat to their ego or their imperical I, the physical body, that they see it as something which must be eliminated and if the word can't be the person becomes shunned by society. Look around society and you can see that evidence clear as day. These are only some of the more common results of

allowing the alterations to words definitions, some less common are completely misunderstanding the word in itself. The best example I see to describe that would be the word atheism, the denial of metaphysics, it's original definition just mentioned had absolutely nothing to do with worship of a god or gods, it had to do with the denial of things beyond the physical or phenomenal. Things like gravity (incoherent dielectric acceleration), EMF, magnetism (coherent dielectric acceleration), etc. those were all seen as impossible to some of the ignorant empire societies, and that's what atheism was denying. All those societies which denied metaphysics had no problem worshiping a god, though their gods were often idols, beings, stones, or something physical. The word atheism was another term for the word materialism or atomism, nothing to do with whether one worshiped a god or not, since to ancient societies gods existed there were no if and or buts about that, everyone has a god no exceptions, it was merely a matter of what god you worshiped. What changed over time was numena or the absence of phenomena became more and more worshiped as a god primarily the christian, Muslim, and other religions gods after the fall of paganism, or before the existence of paganism, Brahmanism, and to counter that the pagans, atomists, tyrants, whatever you wish to call them persecuted those who believed in metaphysics and worshiped the laws beyond their current comprehension as gods, and gave rise to atomism. Over time the definition was changed since more and more believed in metaphysics and the definition changed to meet their current standards, worship numena as a god, and atheism became the denial of god, now there are people who call themselves atheists for not being of any religious belief system when that merely means they're worshiping a different god than the religion not that they have no god, since a god is nothing more than an idol of worship.

Government and corporate sponsored holidays, such as indigenous peoples day, Columbus day, Christmas, new years, etc. are all nothing more than scams, distractions, or escapes from the everyday miserable lives we live, vacations are no different either. The mere fact people choose to accept and celebrate these days, shows exactly how far society has fallen, they show the desperation to claim they're not discriminatory, and how desperate they are from a break from the average work day. This is a problem, it shows exactly how much of society needs to change its over all structure. If you follow a religion and you choose to celebrate that religious holiday then by all means celebrate and you should legally be able to take the day off from work without risking your job or career. How ever majority of people simply look at it as an excuse to get high or drunk, and claim they're celebrating the holiday of another culture making them more supportive of another culture, when in fact it's not and that's just something false humanitarians tell themselves to feel good about using that holiday as an excuse to act irresponsible, which is the exact opposite purpose of any religious celebration. This form of mentality is primarily created from an extremely oppressive and

ignorant/ indoctrinated society or individual. To record the religious holidays is obviously important especially when educating yourself about other cultures, however unless you specifically have ties to the culture or are celebrating the culture with someone who has ties there is no purpose in celebrating it. You don't need an excuse to act irresponsible, get drunk or high, you just need to make the decision for yourself, no need for an excuse, and make sure you don't hurt anyone or violate their rights. The fact society looks for any escape from their everyday lives is a blatant sign society has lost or is losing its individuality in this collective mindset which makes it destined for collapse at some point. A more efficient society would have careers based on passion rather than the idea everyone has to work. While it may be true everyone has to work they don't need to work for others and they definitely don't owe society anything, as society doesn't owe them anything. They could be working to support their family and only require money as a way to purchase materials they don't have access to or don't feel like gathering themselves, however those who do try to remain independent and have no purpose for money should not be denied their right to do so because of this collective mentality.

People have come to misunderstand property and what it is. It is not land in any way land in itself is public property not private. It is common sense to not wish to move to close to those who want more privacy than others, or to not move next door to someone you don't like or who doesn't like you or who doesn't know you. Thus through common sense it can be realized that communities will be naturally built by those who share common ideas and mentalities, and those who don't will remain more independent and cut off from the communities unless a material, product, or service is needed by the individual, then in that case they will find a way to provide the recognized currency to purchase what they require, then go back to their secluded lives. Those who don't wish for seclusion would live in closer communities and most likely work for others or with others in pursuit of a specific goal or goals. Housing, gardens, vehicles, etc. are examples of real property they are things which are man made, technology, other products, services (labor), etc. are also examples of private property, the soul purpose of land not being private property is because if you die and your bloodline dies out that land will not be accessible to other people even with that land left vacant due to a deed being owned still making it necessary for someone who is more wealthy to buy the deed making it less and less likely over the generations fro people to be able to utilize land in their own country, and eventually you see exactly what we see modern day which is people either being homeless in their own country, being crammed into shelters or apartment complexes, duplexes, and other small buildings which shelter more people than should be crammed in a small area resulting in a very unhappy society which looks for any excuse for conflict. If we restructure society to protect their property and own their property

without denying those who don't wish to contribute unless it's for a purpose they decided on their own without manipulation and/ or force, within a generation human nature will ultimately revert back to it's original purpose which is to help one another when they need it, but take care of yourself and your family above all else if a major situation doesn't arise within society, such as an invading army, or a true criminal which violates anothers rights. If we don't address this issue society will collapse and humanity will become more and more violent in revolt of this majority rules slave society built upon the exploitation and forced labor of individuals. The only concept I am unsure about is the produce of farming Which requires land to produce and when an individual is the one responsible for producing it it becomes their property however the more who contribute the smaller the individual property intake is since equal labor calls for equal distribution. The primary problem however is not the distribution, it's the amount of land it calls for, which is purely horizontal format, which is acceptable for a low population society but becomes a denial of the use of land when populations rise above a certain point like ours. The solution to that problem becomes really simple building vertically as much as possible up and down to utilize as least land as possible and produce as much food as possible with indoor agriculture, allowing for a minimization of deforestation, farmland, and an increase in land with the ability to provide for animals, other people, and possibly other building structures like housing, technology, experiments, etc.

The idea of universal laws not based on eternal law. The idea of countries which don't allow for communities to regulate themselves. The idea of an international government in itself is extremely flawed from the very base of the idea. The only laws which are required for a society to function are not really laws at all but more of a constitution, or recognition of rights and limitations on laws which are lawfully allowed to come into existence. The attempts or successions In violating a persons rights are the only criminal acts in existence. Every community should fully regulate itself without outside help from other communities unless asked for by the community in need. Governments no longer need representatives either with the creation of world wide communication, aeroplanes, and other forms of international transportation.

As for specific professions, careers, or specialties it remains pretty obvious the most skilled or gifted in these industries or fields will become the teachers of the next generation and their information, if they choose to provide it should be viewed more often than those without experience or skill, though that primarily means methods in which to create the product is what should be considered, not necessarily the format of employment or structure of positions. Also within the new structure of society all labor should be considered equally important and produce the same wage or currency, making the only way someone gets ahead in life be through hard work and more hours if chosen, by the collective individual and those

who chose not to do so still remain able to provide for themselves and their family. This new structure will provide equal opportunity and remove all unnecessary power over other individuals which is a violation of the individuals rights.

Currency I itself does not need to be a universally recognized format, all that is required is a conversion method for currencies to be transferred between communities for new products, materials, or services. As such a bank is only necessary as something to safely carry funds across the world without losing it, and as such a bank could simply be a decentralized computer network without employees, built on programs which every individual has the ability to access and monitor. Currency is currently built virtually the same way currently only every step of the way someone is trying to get access to your money by claiming labor over the process which is completely unnecessary with the current technological and informational abilities of humanity as this current state in time. Obviously The best state of currency is either the least abundant or most rare natural resource or mineral on the planet as a back for the currency or since every material can be utilized a small set of numbers will be the most acceptable or utilizable. For example let's use 1 penny since I don't feel like making up new words for currency If we can keep the numbers small so 1 strawberry is 1 penny, 1 blueberry is 2 pennies, a cow is 100 pennies or a dollar, the labor to provide 1 strawberry is worth half a blueberry and 1/100th of a cow. Using digital currency with that method we could easily work out an equation for what the produce is worth simply by using algebra. However we have worked our way to a more AI based society where the primary jobs are maintenance of technology, and of course the basic labor jobs such as carpentry. We have the ability for complete automation of agriculture and many other fields with the exception of observation to make sure it's functioning properly, meaning we're more of a salary or hourly based society at this point, making a minimum wage almost completely necessary which can be decided using the algebraic method as well. Making food and other natural resources in themselves priceless without monetary value. The only value would be a wage built on that communities currency for labor which would have to be low enough for people to watch over the programs to make sure they're functioning properly but large enough for people to not worry about whether the can travel where they want when they want, or take a break and sit at home for a period of time if they so choose. I don't have all the answers for how to structure society since I do not hold knowledge of every career, and can not decide how people will choose to interact within society, merely the things in which should be considered to be valued above all other ideas such as equality, freedom, and rights of individuals.
